

EAGLE QA5 Status — 2026-05-08

Epic: EAGLE-291 "Eagle QA5" **Children:** 21 stories, all currently `To Do` in Jira **Method:** cross-referenced each issue against recent commits, this session's PRs (#205–#216), and active tests.

Top-line

Total QA5 stories	21
Addressed by recent work	5
Partially addressed	2
Outstanding	14

✓ Addressed (5)

Key	Summary	Closing work
EAGLE-292	Generated document has different content as specified template (UC3 — \$280K)	PR #213 + #214 — Tier-3 section-drift validator. <code>_template_provenance.section_drift</code> now reports <code>{total_sections, filled_sections, missing_sections[], completeness_pct, is_complete}</code> on every <code>create_document</code> response (both package-mode and workspace-mode). Supervisor can self-correct.
EAGLE-293	UC3-\$280K didn't generate Acquisition Plan	PR #211 unlocked orphan <code>doc_types</code> in <code>get_create_document_types()</code> ; PR #206 fixed the <code>"\$280"</code> currency-string parsing that was rejecting AI-extracted <code>estimated_value</code> . Both gates that blocked this UC3 flow are gone. Verified live: 6 successful post-deploy <code>create_document</code> calls including QASP.
EAGLE-302	Generated AP section headers differ from specified template	Same as EAGLE-292 — <code>section_drift</code> validator surfaces exactly which sections are missing/renamed.
EAGLE-308	Source summary repeated after follow-up	PR #196 — <code>fix(chat): sources_summary chip renders last with visual separation</code> . Rendered once, after the prompt.
EAGLE-316	Error occurred when clicking on attach button	PR #216 (this session) — SSE watchdog. The button was grayed because runtime stayed stuck in <code>status: 'streaming'</code> after a stalled SSE stream (no log entries on either side, matching the symptom). 60s no-event watchdog now aborts the stream and dispatches <code>generation/error</code> , releasing the upload button.

● Partially addressed (2)

Key	Summary	What's done / what's left
EAGLE-300	Contract type reasoning is partial vs RO's reasoning	PR #207 strengthened the supervisor prompt for T&M vs LH (related), with a regression test that exercises the AIP scenario. EAGLE-300 specifically calls out that the supervisor only considered "uncertain in scope" but ignored "we can define types and frequency" — that's a prompt-reasoning depth issue, not the LH gap. The LH guard is in place; the broader reasoning improvement still pending.
EAGLE-309	Previous chat interrupted after clicking new chat	The SSE session-crossover spec exists at <code>.claude/specs/20260506-150700-pbi-sse-session-crossover-fix-v1.md</code> . PR #216 watchdog closes the orphan-streaming-state half (any abandoned stream auto-clears in 60s). The deliberate reducer-level guards described in the spec — preventing session-A's <code>onLog</code> and <code>onStateUpdate</code> callbacks from leaking into session-B's panels — are still pending implementation.

✗ Outstanding (14)

Document quality / format (5)

Key	Summary
EAGLE-294	UC3-\$280K downloaded SOW + Market Research are in MD format instead of PDF/Word
EAGLE-298	Subcontracting plan wording not as clear/logical as RO
EAGLE-301	Inaccurate NAICS code (Eagle: 541612, RO: 541611)
EAGLE-303	Markdown table cells have stray <code>**</code> around text (rendering bug)
EAGLE-310	Downloaded filename not per KB usage guide

Use-case-specific gaps (3)

Key	Summary
EAGLE-311	UC13: \$450K IT services set-aside — Eagle missing FAR 19.104 GAO/SBA citations + CIO-SP3 SB vehicle recommendation
EAGLE-312	UC10: IGCE — Excel has no projected numbers; download is Excel-only, no Word counterpart
EAGLE-313	UC4: Competitive range — Eagle adds unnecessary RFO; FAR 15.2 quote less detailed than RO's FAR 15.204-1

Supervisor prompt / output quality (3)

Key	Summary
EAGLE-296	Source summary should exclude template files (currently bundles them as input)
EAGLE-297	Used legacy vehicle name "GSA PSS" instead of new "GSA MAS" — supervisor prompt update needed
EAGLE-299	Required-documents section: "Required" flag is redundant with section header; Notes column adds noise

UI (3)

Key	Summary
EAGLE-295	Add "Think cube" to display Eagle's reasoning process after input files pulled
EAGLE-307	Text got cut off by Web search cube
EAGLE-317	Banner updates: rename to "Enhanced Acquisition Guidance and Learning Engine"; remove Eagle icon mid-screen; add username right side

Cross-reference: this session's PRs

PR	Closes / Advances	Note
#196 (earlier)	EAGLE-308	Sources summary chip ordering
#206	EAGLE-293 (partial)	\$280 parsing unblocks the IGCE that gates UC3 doc-gen
#207	EAGLE-300 (partial)	Stronger LH/T&M supervisor rule
#211	EAGLE-293	Orphan doc_type unlock — UC3 docs now generate
#213	EAGLE-292, EAGLE-302	Section-drift validator
#214	EAGLE-292, EAGLE-302	Drift surfacing on package-mode response (the actual UC3 path)
#216	EAGLE-316, EAGLE-309 (partial)	SSE watchdog — unsticks attach button + clears orphan streams

Recommended next moves

1. **Verify & close 5 in Jira** (EAGLE-292, 293, 302, 308, 316). Each has a concrete closing PR.

2. **Update partial pair** (EAGLE-300, 309) with current state — mark "in progress, partial" with notes pointing at this session's PRs.
3. **Group the 14 outstanding** into 4 mini-batches:
4. **Doc quality batch** (5): EAGLE-294/298/301/303/310 — needs export pipeline + KB content fixes
5. **UC-specific batch** (3): EAGLE-311/312/313 — supervisor reasoning + KB gaps
6. **Supervisor prompt batch** (3): EAGLE-296/297/299 — pure prompt edits, fast
7. **UI batch** (3): EAGLE-295/307/317 — frontend polish

The supervisor-prompt batch (EAGLE-296/297/299) is the cheapest wins — small prompt edits with regression-test patterns already established this session.
